Built to survive

1

Structural Adaptation

Cactus

Spines and a thick stem help it survive because they reduce water loss in dry habitats.

2

Structural Adaptation

Duck

Webbed feet help it survive because they make it easier to swim in water.

3

Structural Adaptation

Polar Bear

Thick fur helps it survive because it keeps it warm in freezing temperatures.

4

Behavioral Adaptation

Birds Migrating

Migrating helps them survive because they move to warmer places with more food in the winter.

5

Behavioral Adaptation

Black Bear

Hibernating helps it survive because it conserves energy when food is scarce in the winter.

Adaptations help an organism survive in its environment.
