

Organisms & Environments

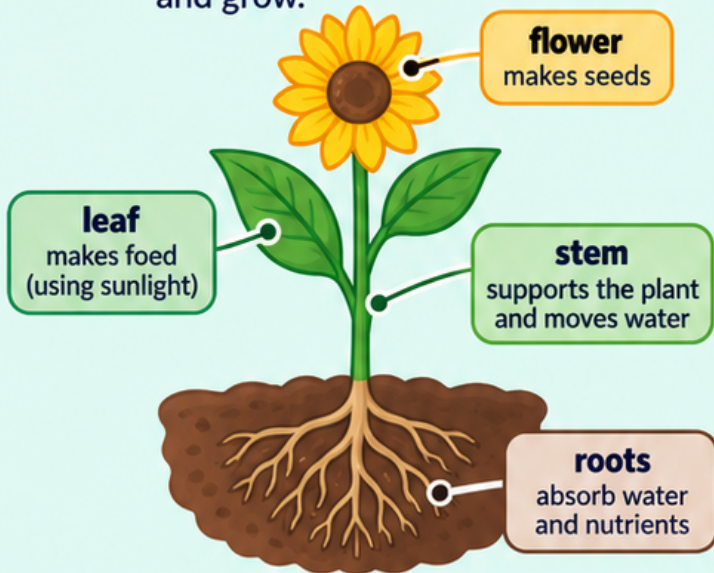

— Five Cue Cards —

Living things. Their needs. Their connections. Our natural world.

1

Plant Parts & Functions

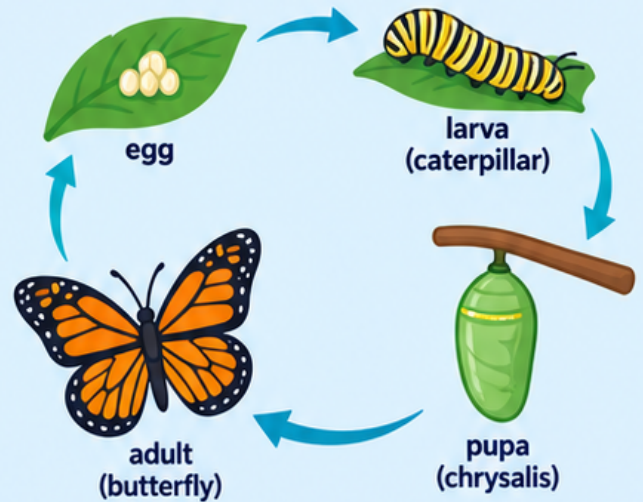

Each part helps the plant survive and grow.

2

Life Cycles

Living things grow, change, reproduce, and begin again.

3

Inherited Traits & Learned Behaviors

Some traits are passed from parents. Some behaviors are learned from experience.

Inherited traits
come from parents
(e.g., fur color, eye color).

Learned behaviors
are gained from
experience
(e.g., fetching a ball).

4

Adaptations

Adaptations help organisms survive in their environments.

Thick fur helps a polar bear stay warm in cold places.

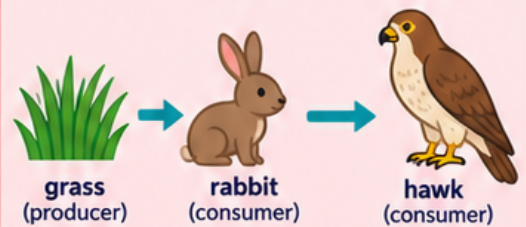

Spines and water storage help a cactus survive in hot, dry places.

5

Food Chains & Ecosystems

Living things depend on each other, and on their environment.

Organisms and their environment work together in an ecosystem.

Key Idea: All organisms are connected to each other and to their environments.
