

Rocks, Soil & Fossils

Clues from the ground

1

Soil Layers

Soil is a mix of rock bits, organic matter, water, and air.

Soil is made of:

- ✓ rock bits (sand, silt, clay)
- ✓ decayed plants and animals (organic matter)
- ✓ water
- ✓ air

Topsoil

Dark, rich in organic matter. Plants grow here.

Subsoil

Lighter color. Fewer organic materials.

Rock

Solid rock beneath the soil.

2

Natural Resources

Earth provides many natural resources that we use.

Water

We drink it and use it every day.

Rock

Used for buildings, roads, and more.

Soil

Helps plants grow our food.

Fuels

Oil, natural gas, and coal give us energy.

3

Fossils

Fossils are clues about living things from long ago.

Sedimentary rock layers

Fossils are often found in layers of sedimentary rock.

Fossils in rock layers tell us about the past.
