

States of Matter

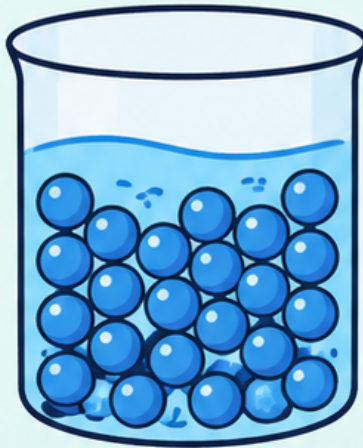

Solid • Liquid • Gas

SOLID

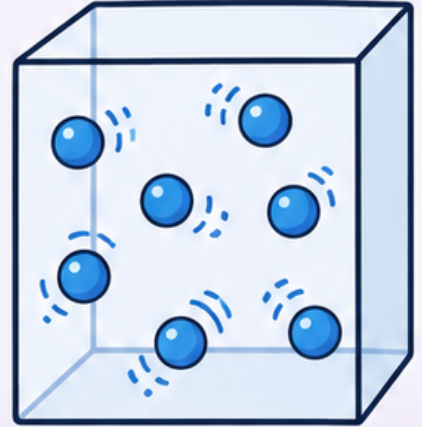

- ✓ Particles are close together in a fixed position.
- ✓ Definite shape.
- ✓ Definite volume.

LIQUID

- ✓ Particles are close together but can move past each other.
- ✓ Takes the container's shape.
- ✓ Definite volume.

GAS

- ✓ Particles are far apart and move freely in all directions.
- ✓ Fills the container (even a large one).
- ✓ No definite shape or volume.

HEATING

Particles move more.

COOLING

Particles slow down.

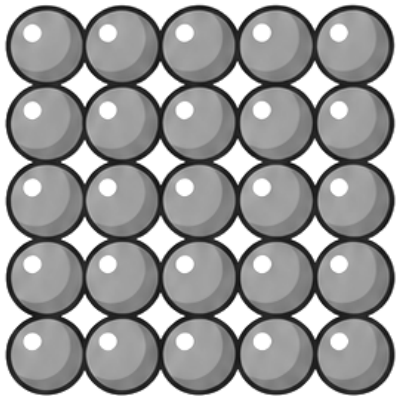

Heating and cooling can change the state of matter.
