

Weather

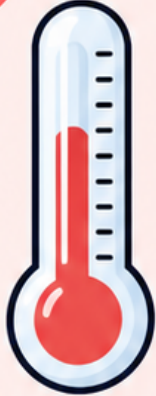

Measure it with the right tool

1

Thermometer

Measures temperature
(how hot or cold).

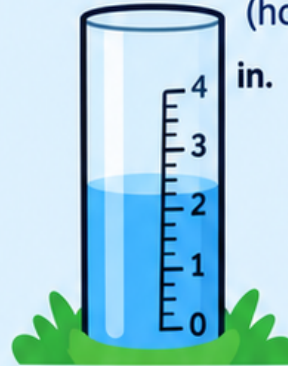

Temperature is
measured in
degrees (°F or °C).

Example:
72°F

2

Rain Gauge

Measures precipitation
(how much rain or snow).

in.

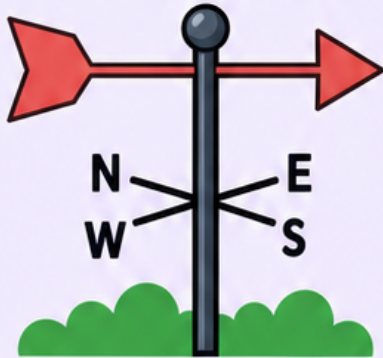

Precipitation is
measured in
inches (in.).

Example:
2.5 in.

3

Wind Vane

Shows wind direction
(the way the wind blows).

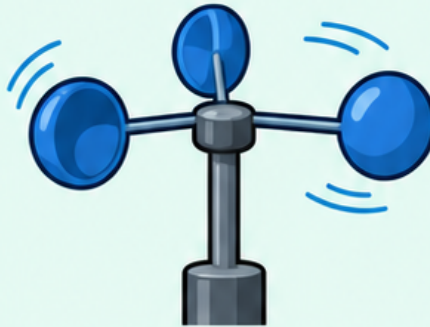

Points to the direction
the wind is coming from
(e.g., north, south, east, west).

4

Anemometer

Measures wind speed
(how fast the wind blows).

Wind speed is measured
in miles per hour (mph).

Example:
15 mph

5

Barometer

Measures air pressure
(in the atmosphere).

Air pressure is measured
in hectopascals (hPa).

Example:
1013 hPa

Weather

Day to day.
Can change quickly.

Climate

The usual pattern
over a long time
(many years).

Weather is right now; climate is the long-term pattern.
