

Integer Rules

Adding • Subtracting • Multiplying • Dividing

1 Add & Subtract

Same signs →
add & keep the sign.

$$-3 + -5 = -8$$

Different signs →
subtract & take the sign of
the larger absolute value.

$$-7 + 4 = -3$$

Subtract: add the opposite, then apply the adding rules.

$$5 - 8 = 5 + (-8) = -3$$

Numbers get smaller to the left and larger to the right.

2 Multiply & Divide

$$(+)(+) = +$$

$$(-)(-) = +$$

Same signs →
positive.

$$(+)(-) = -$$

$$(-)(+) = -$$

Different signs →
negative.

Even number of negatives → **positive**; **odd** → **negative.**

(For multiplication and division of nonzero factors.)
