

Solving Equations

Undo with inverse operations

Do the same operation to both sides
to keep the equation balanced.

1 One-Step Equation

$$x + 7 = 12$$

$$2 \quad x + 7 - 7 = 12 - 7$$

Subtract 7 from both sides

$$3 \quad x = 5$$

1 Two-Step Equation

$$2x + 3 = 11$$

$$2 \quad 2x + 3 - 3 = 11 - 3$$

Subtract 3 from both sides

$$2x = 8$$

$$3 \quad 2x \div 2 = 8 \div 2$$

Divide both sides by 2

$$4 \quad x = 4$$

Undo addition/subtraction first,
then multiplication/division.
