

Ratios & Unit Rate

Comparing quantities

1

A ratio compares two quantities.

3 blue dots to 2 green dots

The same ratio can be written three ways:

3 to 2

(word form)

3 : 2

(colon form)

$\frac{3}{2}$

(fraction form)

2

A unit rate tells you how much of one thing for a single one of another thing.

Divide to get per ONE.

\$6 for 3 apples

Total cost: \$6 for 3 apples

$$\text{\$6} \div 3 = \text{\$2}$$

$$6 \div 3 = 2$$

\$2 per apple

A unit rate has a denominator of 1.
