

Physical Properties of Matter

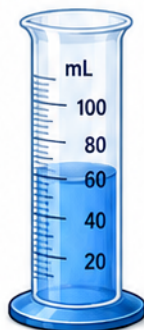

Observe and Measure Without Making a New Substance

1 MASS

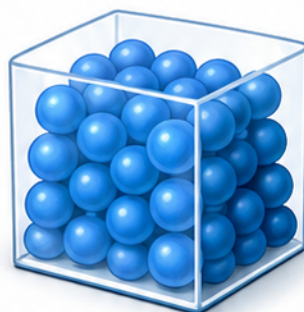

the amount of matter in an object

2 VOLUME

the amount of space an object takes up

3 DENSITY

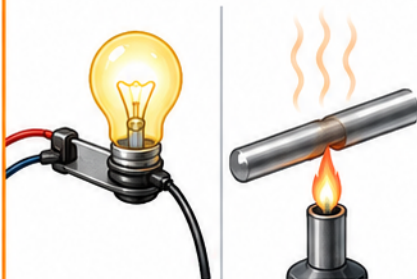

how much matter is packed into a volume

4 SOLUBILITY

how well a substance dissolves

5 CONDUCTIVITY

how well heat or electricity moves through a material

6 MAGNETISM

whether a material is attracted to a magnet

Physical properties can be **observed** or **measured without changing** the substance.
