

Lines & Angles

Name what you see

Point

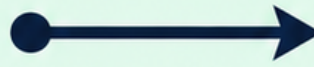

A point shows a location.

Line

A line extends forever in both directions.

Ray

A ray has one endpoint and extends forever in one direction.

Segment

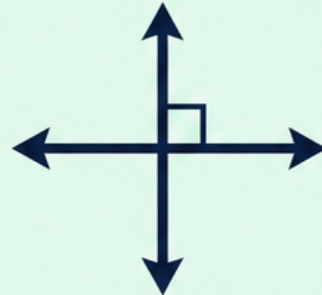

A segment has two endpoints and a fixed length.

Parallel Lines

Parallel lines never intersect.

Perpendicular Lines

Perpendicular lines intersect to form a right angle (90°).

Angles

Right Angle
 90°

Acute Angle
 45°

Obtuse Angle
 120°

A right angle is a square corner; acute is smaller, obtuse is larger.
