

Rounding

Find the place • check the neighbor

- 1** Underline the rounding place.

47
(nearest ten)

- 2** Look at the digit to its right.

4**7**
This is the neighbor.

- 3** 5 or more → round up;
4 or less → stay the same.

5 or more → round up
4 or less → stay the same

- 4** Digits after the rounding place become 0.

47 → 50
(nearest ten)

Example: Round 47 to the nearest ten.

47 rounded to the nearest ten is 50.

Look right to decide; everything after becomes zero.
