

Force, Motion, and Energy Printables

Five colorful cue cards for grades 6–8.

★ Quick references to support learning and success.

1 Average Speed

Average speed = distance
traveled ÷ time taken

$$s = d \div t \quad \bullet \quad d = s \times t \quad \bullet \quad t = d \div s$$

2 Force

Force = mass × acceleration

$$F = m \times a \quad \bullet \quad m = F \div a \quad \bullet \quad a = F \div m$$

3 Newton's Laws

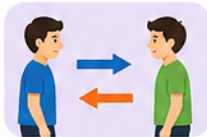

1. Inertia

Objects resist
changes in motion.

2. Acceleration

Net force causes
changes in motion.

3. Action-Reaction

For every action,
there is an equal and
opposite reaction.

4 Heat Transfer

C

Conduction

C

Convection

R

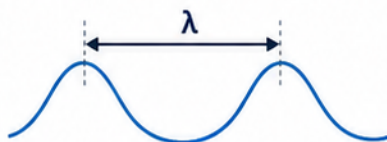

Radiation

Heat moves in three ways.

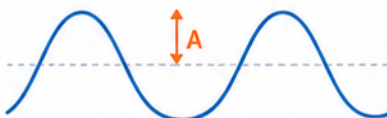

Conduction • Convection • Radiation

5 Wave Properties

Wavelength (λ)

Distance between
identical points
on a wave.

Amplitude (A)

Maximum displacement
from the equilibrium
position.

Frequency (f)

Number of waves
that pass a point
per second.

Printable classroom supports

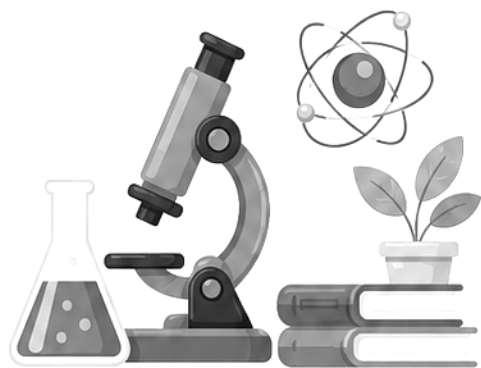

Use, review, and reinforce key science ideas every day.
