

ELECTROMAGNETIC SPECTRUM

Wavelength, Frequency, and Energy

The electromagnetic spectrum is the full range of electromagnetic radiation.
All types of EM radiation travel at the speed of light in a vacuum.

Frequency (Hz)	$10^4 - 10^8$	$10^8 - 10^{11}$	$10^{11} - 10^{14}$	$10^{14} - 10^{15}$	$10^{15} - 10^{16}$	$10^{16} - 10^{19}$	$10^{19} - 10^{22}$
Energy (eV)	$10^{-10} - 10^{-6}$	$10^{-6} - 10^{-3}$	$10^{-3} - 10^{-1}$	$10^{-1} - 10^0$	$10^0 - 10^1$	$10^1 - 10^4$	$10^4 - 10^7$
Examples	 AM/FM radio, TV broadcast	 Microwaves, Wi-Fi, radar	 Heat lamps, remote controls	 What our eyes can see	 Sunburn, black lights	 Medical imaging, airport scanners	 Cancer therapy, cosmic rays

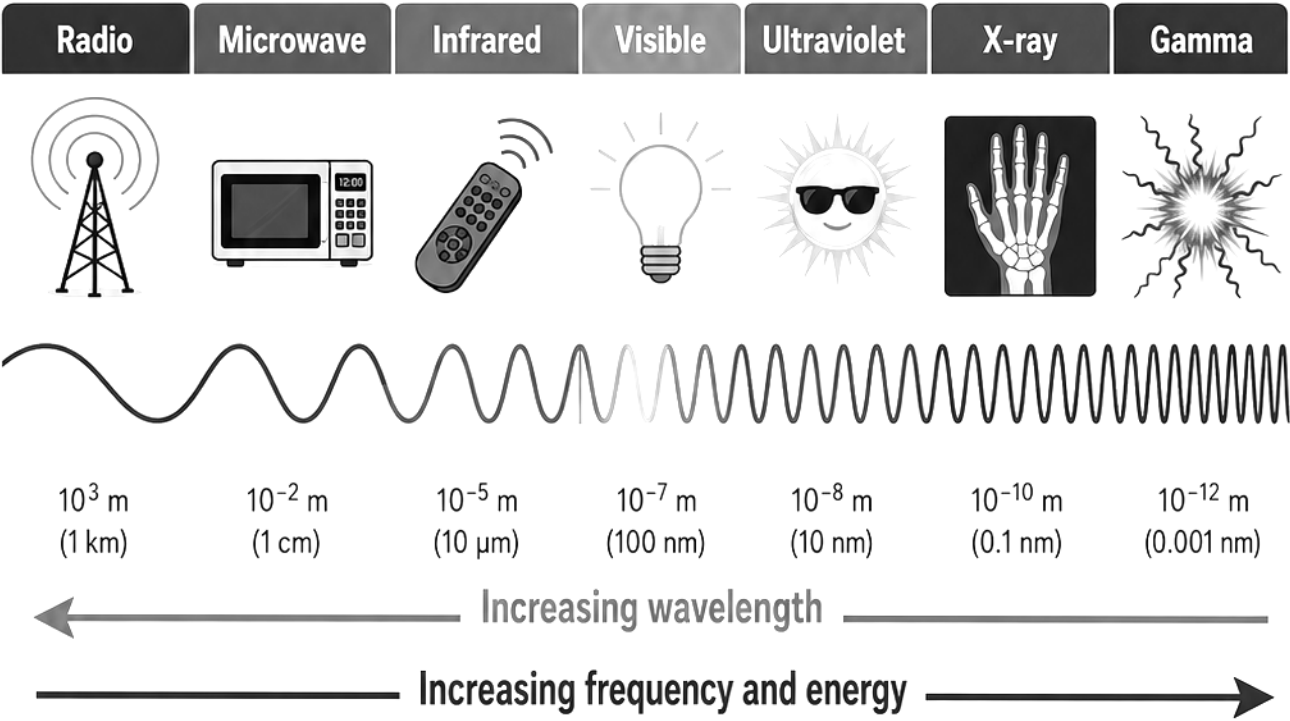

Visible light is a small part of the electromagnetic spectrum.
